FRONT-END DEVELOPER | SOFTWARE ENGINEER

Proficient Software Engineer with a passion for delivering exceptional user experiences through innovative front end web development. Skilled in React, JavaScript, HTML, CSS, and RESTful API architecture. Quickly adapts to new technologies and consistently seeks opportunities for professional growth. Seeking a forward-thinking organization with a supportive culture of learning and development.

SKILLS

JavaScript, React, Java, Spring Boot, PostgreSQL, HTML, CSS, Rest API, Postman, Firebase, PGAdmin, Framer Motion, JDBC, Jackson, JPA, Babel, Maven, NPM, Adobe Photoshop, Adobe Illustrator, Figma, Monday

PROJECTS

Who's Who Spotify Guessing Game - GitHub

React game application, allowing users to select a genre and number of songs/artists to guess from using the Spotify API.

- *Utilized the Spotify API to develop a music guessing game application, allowing users to select a genre and number of songs/artists to guess from.*
- *Implemented an interactive media player using HowlerJS in order to control playback, volume, and song skipping. Styled and built with CSS.*
- *Developed custom UI components and buttons utilizing CSS and implemented conditional styling to visually signify a winner or loser apparent to the user based on win/lose outcomes.*
- *Contributed to writing logic for saving user preferences in local storage and utilized Git for collaboration and version control.*

Company Management Application - GitHub

Project management tool that helps administrators distribute information, specifically announcements and project details, to their worker base.

- *Utilizing a Java backend with Spring Boot for receiving and posting user-specific data, my team and I developed the visual aspect and user experience of the application.*
- *For the purpose of adding new user data to the database, I implemented custom modal components and forms using CSS and Material UI to handle submitting new data.*
- *Ensured application page responsiveness by utilizing CSS media queries and taking different screen sizes into consideration when developing UI components.*
- *Built a set of card components that showed user-specific data from making requests to the backend by fetching from specific API endpoints.*

Dev Duel Game - GitHub

React game application that utilizes GitHub's API to get user data in order to inspect or duel another developer.

- *Developed custom UI components for displaying GitHub user profile and repository data that is received from sending requests to specific endpoints.*
- *Implemented conditional styling to visually signify a winner or loser, apparent to the user based on win/lose logic.*
- *Built modals with input elements for users to input a GitHub username that they would like to either inspect or duel, using React Router to link pages.*

EXPERIENCE

Cook Systems   Remote
FastTrack Developer   12/2022 - Present

- Studied and trained on Java, Spring, Spring Boot, Hibernate and JDBC to better solidify back-end development knowledge.
- Developed multiple front-end and full-stack applications on multiple teams.
- Utilized Git for collaboration and version control on a series of assignments and assessments.
- Led the front-end team in a final full-stack application assignment to deliver a company management app in a one-week sprint.

Freelance Remote
UI/Graphic Designer 01/2019 - 01/2023
- Developed marketing material designs for client event promotions and social media campaigns.
- Conceptualized apparel designs in mockup forms for client clothing line collections, resulting in physical printed apparel.
- Defined client's tone and aesthetic by designing logo sets and brand identity.
- Managed and coordinated design projects from concept to printed materials such as Flyers, Menus, Business Cards, Brochures, Clothing and Posters.

Industry Print Solutions Scottsdale, AZ
Director Of Operations 01/2017 - 05/2021
- Implemented various printing methods and operated numerous digital printing machines.
- Managed product data on Shopify, uploading, editing and updating products to ensure the company products were managed and up to date.
- Implemented a new shipping system that increased fulfillment speed by optimizing the inventory management system.
- Ensured that print production was error-proof by editing and color-calibrating designs before the final output.

EDUCATION

Cook Systems FastTrack Java Program - C*ertificate* *link* Tennessee
Concentrated Java Frameworks and developer tools training 12/ 2022 - 02/2023

Flatiron School - C*ertificate* *link* New York
Full Stack Web Development - HTML, CSS, JavaScript, React, Ruby and Ruby on Rails 11/ 2021 - 03/2022

Moon Valley High school Arizona
High School Diploma 01/ 2010 - 01/2013
